EDUCATION

California Polytechnic State University, San Luis Obispo (Cal Poly) **Expected Graduation: June 2025**
Bachelor of Science, Computer Science *GPA: 3.85 / 4.0*
Relevant Coursework: Data Structures and Algorithms, OOP, Databases, Programming Languages, Operating Systems, Theory of Computation I, Knowledge Discovery in Data, Distributed Computing, Dynamic Web Development
Activities and Honors: Cal Poly Men's Swim Team, Dean's List: Fall 2021- Spring 2024, President's List: 2021-2024

SKILLS

Languages: Python, Java, C, C++, JavaScript, HTML, CSS, Swift, SQL **Frameworks:** React, Next.js, Express.js, Prisma, Pandas
Tools & Platforms: Node.js, REST APIs, Supabase, PostgreSQL

EXPERIENCE

Software Engineering Intern at Park - ***Startup Simplifying Investing and Money Management*** **June 2024 - October 2024**

- Collaborated cross-functionally with product managers, designers, and engineers throughout the full **SDLC** in a **Scrum-based Agile workflow,** participating in weekly stand-ups and regular one-on-ones to align priorities and ensure timely feature delivery.
- Built expense logging and financial goal tracking end-to-end features of a full-stack application using **SwiftUI**, **Python, Firebase** database**, and FastAPI** from scratch for a flagship financial investment mobile application in a team of 5 other developers.
- Balanced request load between the SwiftUI front end and FastAPI back end by implementing **pagination** and optimizing data refresh triggers based on user actions, resolving data sync issues, and improving performance for expense logging and financial visualization features.
- Designed and implemented a robust **CI/CD pipeline** using **GitHub Actions** to automate build, test, and deployment processes for a mobile application. Enforced branch synchronization with the main branch to prevent stale merges, resulting in consistent code integration, reduced merge conflicts, and a **~15%** improvement in pull request handling and development turnaround time.
- Developed a reusable suite of **unit tests** to standardize and expand test coverage across multiple components.

Cal Poly Men's Swimming, Division 1 Student Athlete **September 2021 - June 2024**

- Orchestrated inter-team practices, events, and leveraged communication skills alongside the team's Head Coach and 60+ athletes.
- Maintained a 3.85 GPA while managing a rigorous training/competition schedule and team leadership responsibilities.

PROJECTS

Gym-O - *Fitness and Nutrition Tracker Full Stack Web Application* **Jan 2025 - June 2025**

- Developed a full-stack web application using **TypeScript**, **React**, **ExpressJS**, and **NodeJS** to enable users to track workout details, nutrition, and set fitness goals, improving user engagement and fitness progress tracking.
- Designed **mobile-first, responsive mock-ups** and implemented them using **React SPA architecture** and **semantic HTML**, ensuring an optimized experience across devices and between features like workouts, nutrition logging, and goal setting.
- Implemented user authentication and **RESTful API** with **ExpressJS**, enabling secure user profiles, personalized data storage, and efficient backend communication, leveraging **MongoDB** for fast, scalable data management.

Cauldrons and Potions - *E-commerce Backend API* **September 2023 - December 2024**

- Designed and developed a **RESTful** API backend infrastructure for an e-commerce platform stored on **Supabase** and handled recurring transactions from 1,500+ uniquely simulated customers using **FastAPI** and **PostgreSQL**.
- Implemented endpoints to facilitate **idempotent** inventory management and minimize concurrency issues. Effectively managing inventory, encompassing raw materials, finished goods, and financial resources from transactions with customers and vendors.
- Engineered a dynamic API for the backend of an e-commerce website, streamlining business plan execution and enabling effortless updates, ensuring agility and adaptability in response to market changes.

Carpool With Me! - *Full Stack Web Application* **March 2023 - June 2024**

- Led backend development for a team of 6 for a student carpool full-stack web application using **Nextjs, Docker, and JavaScript.**
- Designed and implemented RDBMS using **Docker** and Docker Compose to represent relationships between user types, ride posts, booking requests, and a message system.
- Led system design discussions and made decisions about data architecture.
